Profile

As a software engineer candidate, I have extensive experience with C#, Java, C, Python, Unity, .NET, WPF, and Django, and have applied these tools to a variety of academic and personal projects. Through my coursework and extracurricular activities, I have gained expertise in areas such as software engineering, algorithm analysis, data structures, design patterns, machine learning, artificial intelligence, and natural language processing. I am committed to using my skills and experience to contribute to the success of any team I am a part of and am always eager to take on new challenges and learn from others.

Education

Computer Engineering Bachelor's Degree,
TOBB University of Economics and Technology
Sep 2018 – Aug 2023 | Ankara, Turkiye

High School Diploma, *Karasu Anatolian High School*
Aug 2018 | Sakarya, Turkiye
GPA: 3.93

Professional Experience

Back-End Developer, *BUMPER TECHNOLOGY*
Sep 2022 – Dec 2022 | Ankara, Turkiye
I worked as a Back-End Developer Intern at Bumper, where I developed applications for the company's official site's admin panel using Python and Django. During my internship, I also gained valuable experience in database operations.

Front-End Developer, *Innova IT Solutions*
Jan 2022 – Apr 2022 | Ankara, Turkiye
I worked as a Front-End Developer Intern on the implementation of a web application called Lega Finans. My primary focus was coding in Typescript using the Angular framework.

Full-Stack Developer,
SimBT Simulation Science and Technologies Ltd.
May 2021 – Sep 2021 | Ankara, Turkiye
I worked as a Full-Stack Developer Intern at SimBT, where I primarily developed WPF applications within the .NET environment. Additionally, I was involved in tasks such as hotfixes, bug fixes, and performance analysis.

Projects

FreeRun: The Ultimate 3D Parkour Game
We developed a 3D parkour game called FreeRun as a team of three using the Unity game engine. In this game, players navigate through various obstacles, using a weapon to hit targets and gain bonus time, while attempting to complete the parkour in the shortest time possible.

Skills

- C#
- .NET
- Java
- C
- Python
- Unity
- WPF
- Django
- OOP
- Visual Studio
- VS Code
- SQL
- MSSQL
- SQLite
- Jira
- Git
- Github
- Bitbucket
- SourceTree
- CI/CD

MetaFuar: Virtual Fairground for Interactive Product Showcasing
We developed a virtual fairground called MetaFuar as a team of five using the Unity game engine, along with Oculus Interaction SDK and Photon. The project features a virtual exhibition space where companies can showcase and promote their products, enabling users to visit the company's store from the comfort of their homes, browse and purchase products. Additionally, the fairground includes a bowling alley where visitors can play games if they choose to.

Music Genre Classification with Turkish Lyrics
In this study, as a group of two, we carried out a project aiming to classify Turkish song genres according to their lyrics using Natural Language Processing techniques. We trained the lyric corpus we created with machine learning models and Bi-LSTM. The results from the project have the potential to help the Turkish music industry understand market trends and consumer preferences and can contribute to Turkish music listeners discovering new music.

Creating Logistics Centers for Transport Companies across Turkey with Artificial Intelligence and Linear Programming
I prepared this project to determine the most optimal number of logistics centers and the locations of these centers for a transportation company in Turkey. The map and database created as a result of the project will provide transportation companies with a valuable resource regarding the most suitable warehouse locations.
